Steam Educator Program (For Teachers)

About the Program

STEAM is a contextual curriculum where subjects are coordinated in such a manner that they work support systems for each other. It is essential to note that these scaffolds are not just under the educational umbrella of engineering, math and science but also include the arts in both the aesthetic sense along with the artistic divisions of liberal, language and physical arts.

The realistic purpose of the STEAM Curriculum Framework is to ensure student learning in life as well as education. STEAM is a practical curriculum which aims at inculcating skills like critical thinking, creativity and collaboration through a project and problem-based learning approach. However, the purpose of the STEAM framework is incomplete without a properly trained facilitator.

About the Instructor

Danish is an Internationally certified and licensed TESOL Trainer from the Arizona University and also Pakistan's very first Common-Sense Educator, STEAM Educator as well as being a Cambridge English Trained Agent which entails him to counsel Students, Teachers and Professionals on the importance of Cambridge English Certification; furthermore, he has completed his Business and Leadership Management from the Michigan University. He is also a Microsoft Educator, Adobe's Master Trainer and Intel's Technology Partner, and currently working on his Teacher Training Licensing Program from London Teacher Training College OFQUAL Affiliated program. Danish's international achievements include publication of four books on an international platform like Amazon, Barnes & Noble & Simon & Schuster. He has also been given an honorary position of a Research Reviewer for the Editorial Management Organization.
